

Vault Structures Inc. — Aegvs Series Panels

Tel: 800 226 3990

Aegvs Series

Class M - 4" Thick	53 lbs.
Class I - 5" Thick	69 lbs.
Class II - 7" Thick	95 lbs.
Class III - 12" Thick	169 lbs.

All the strength and security you have come to expect from VSI.

The original Modular Vault Panel custom, solid, sturdy protection.

VSI – One for the **aegvs**

When security of the highest level is required, VSI provides the answer.

The concrete panels are manufactured of a combination of concrete products and security fibers enclosed within a metal frame. The panels are designed to fit together on site to create the walls, ceiling and floor of the vault. Only electrostatic coated metals are used. Welds are coated to ensure there is no material degradation. VSI's manufacturing methods meet the strict requirements of Underwriters Laboratory Safety Standard, U.L. 608.

Panel width is limited by job conditions together with the equipment used to install the vault. These factors should be considered when designing your vault and discussed with your VSI vault coordinator. In today's market the use of proper design can lead to greater economy and a potential increase in security.

Coordinated with your architects, designers and engineers throughout the fabrication process. Delivery and installation by our experienced teams to provide a total solution.

VSI's Aegvs series panels The original panels that have taken us to the top of the physical security industry

Made in America

Manufacturer reserves the right to change product specifications without notice.
