

# Vault Structures Inc. — Thor III Vault Door

Tel: 800 226 3990

Door shown with optional custom logo

## Thor III

### Security

All Thor III Vault Doors are designed to meet Underwriters Laboratories requirements as outlined in Standard for Safety U.L.608 and carry the U.L. label for selected Class. The standard door has a 12" vestibule. Optional sizes are available.

### Installation

VSI or a local associate dealer will install your Thor III Vault Door anywhere in the world. All installation hardware, including jack bolt assembly and door stop are included. The door is left completely protected after the installation process.

### Secure Construction

Because of its special construction, the Thor III Vault Door weighs considerably less than a steel slab door. It can be installed in locations where weight constrictions limit installation. Construction includes special grade steel and high strength concrete. A door "collar" is available to allow the door to be installed flush with the inside vault wall.

### Custom Design

The Thor III attractive design and massive appearance will compliment any decor. The satin smooth fine grained stainless steel finish covers every visible surface. Your choice of custom designed logos and special finishes are also available. The Thor III Vault door is available with left or right swing.

**Made in America**

Manufacturer reserves the right to change product specifications without notice.
